Tomas Babjak (Tomi)

Senior Frontend Engineer · Prague, Czechia

babjatom@gmail.com · +66 82 782 9578 · linkedin.com/in/babyak · github.com/babjatom · tomibabjak.dev

Senior frontend engineer with over 10 years building React and Next.js products in TypeScript. Shipped public pages, an assessment UI, and a Storybook frontend, and led a 4-person team through a legacy UI modernization. Migrated Next.js at Plots and kept the ROI UI and Mixpanel in place through redesigns.

SKILLS

Frontend	React, Next.js, TypeScript, Redux, Tailwind CSS, Storybook, Material UI
Languages	TypeScript, JavaScript, C#, Go, Python, PHP
Backend	Node.js, Go, Python, C/C++, PHP
Data	PostgreSQL, MySQL, MongoDB, DynamoDB
Cloud	AWS (Lambda, Step Functions, AppSync), message queues, GCP, GKE, Docker, Cloudflare Workers, R2, D1, GitHub Actions, Vercel
Observability	Datadog, Sentry, New Relic, Mixpanel
Practices	Testing, domain-driven design, Temporal durable executions
AI tooling	Cursor, Claude Code, GitHub Copilot. Experimenting with local open-source LLMs and inference on a rented GPU on vast.ai.

EXPERIENCE

Fullstack Engineer · Plots Inc 2024–2026

Los Angeles

React, Next.js, TypeScript, Go, AWS, DynamoDB, Lambda, Postgres, GraphQL, AppSync, Tailwind CSS, Mixpanel

- Built public and event pages in React, Next.js, and TypeScript, plus internal analytics dashboards backed by Go, Postgres, DynamoDB, and Lambda.
- Migrated Next.js to a newer major version, preserved the critical ROI UI, and kept Mixpanel on those paths through redesigns.
- Developed redesigned onboarding and event pages, and expanded unit and end-to-end tests on the React and Next.js UI.
- Developed features and tests from specs with Cursor and coding agents, then deployed manually after human review.

Fullstack / CTO · Elitebrains.com 2021–2024

Prague

React, Next.js, TypeScript, Node.js, Express, MongoDB, MySQL, GCP, Judge0 (self-hosted on GKE)

- Built a React assessment UI on Next.js and TypeScript. Self-hosted Judge0 evaluated the AI-generated coding questions.
- Led engineering for an HR technical-screening and coding-assessment platform, including the Node.js path into the existing PHP stack.
- Deployed Judge0 on GKE with monitoring and autoscaling tuned for bursty assessment load and low idle cost.
- Set the delivery process on GCP and bare metal, and kept Kubernetes for bursty assessment load instead of always-on capacity.

Tech Lead & Web Engineer · PropertyGuru.com.sg 2017–2021

Singapore

React, Redux, TypeScript, Nest.js, MongoDB, MySQL, GCP, AWS, Tableau

- Modernized the frontend with React, Storybook, Material UI, and TypeScript.
- Led a 4-person Agile team on listings stats, supply and demand, and user management.
- Extracted critical paths from a legacy PHP framework into independently deployable Node.js services, with Docker and custom CI/CD.
- Built a multi-step AWS image-compliance pipeline with Data Science across on the order of 80M+ user images, with Redis on the hot path and gradual enforcement by user role and listing volume.
- Implemented a multi-country geo schema change for about 20M+ building records with fast SQL, rolled out country by country so downtime stayed minimal.

Web Engineer · Rabbit Finance, Co. Ltd. 2014–2017

Bangkok

Node.js, TypeScript, PHP, Laravel, MongoDB, PostgreSQL

- Built the web and CRM products for a financial-product comparison service and oversaw mobile work for a Bangkok Skytrain rewards program.
- Led a small team on that comparison service (insurance and credit cards) and a Laravel call-center CRM.
- Migrated MongoDB to PostgreSQL overnight for about 500k customers and about 1M products. The public comparison engine stayed up with a dual-run fallback until Postgres was the primary database.

Co-founder & Web Engineer · BeatBeat 2012–2014

Prague

Icecast, Python, MySQL

- Built music streaming apps from zero, with Icecast streaming servers, a Python control API, and a MySQL web app, and represented the company at investor pitches.

Web Engineer · CLEEVIO 2010–2012

Prague

C#, JavaScript, HTML, CSS

- Built cross-browser extensions for Internet Explorer, Chrome, and Firefox in C#, JavaScript, HTML, and CSS, including an ad blocker.

PROJECTS

Ask Tomi · tomibabjak.dev 2026

- Built the public React chat for a persona-grounded interview assistant, backed by a Python Cloudflare Worker with follow-up memory and rate limits.

Flood monitor · flood.tomibabjak.dev 2026

- Built live flood monitoring for Thailand, with Cloudflare R2 storage and Cloudflare Workers.

FlightRadar24 receiver 2023

- Built an ADS-B air-traffic receiver on a Raspberry Pi and a map for the tracks.

EDUCATION

Czech Technical University, Prague 2009–2013

INTERESTS

Plane spotting and flight tracking.
