Tomas Babjak (Tomi)

Senior Full-Stack Engineer · Prague, Czechia

babjatom@gmail.com · +66 82 782 9578 · linkedin.com/in/babyak · github.com/babjatom · tomibabjak.dev

Senior full-stack engineer with over 10 years of experience building web products in React, Next.js, TypeScript, Node.js, and Go. Led small agile teams and owned cloud architecture on AWS and GCP. Delivered production systems at PropertyGuru, Elitebrains, and Plots, including an image-compliance pipeline across on the order of 80M+ user images, a coding assessment platform, and a public interview assistant on Cloudflare Workers.

SKILLS

Languages	TypeScript, JavaScript, Go, Python, PHP, C#
Frontend	React, Next.js, Redux, Tailwind CSS, Storybook, Material UI
Backend	Go, Node.js, Express, Nest.js, GraphQL, Symfony, Laravel, Python (Flask, Tornado)
Data	PostgreSQL, MySQL, MongoDB, DynamoDB
Cloud	AWS (Lambda, AppSync), GCP, GKE, Docker, Cloudflare Workers, GitHub Actions, Vercel
Observability	Datadog, Sentry, New Relic, Mixpanel
Practices	Testing, domain-driven design, Temporal durable executions
AI tooling	Cursor, Claude Code, GitHub Copilot

EXPERIENCE

Fullstack Engineer · Plots Inc 2024–2026

Los Angeles

React, Next.js, TypeScript, Go, AWS, DynamoDB, Lambda, Postgres, GraphQL, AppSync, Tailwind CSS, Mixpanel

- Built full-stack public and event pages and internal analytics dashboards in React, Next.js, TypeScript, and Go. Analytics paths used Postgres, DynamoDB, and Lambda.
- Migrated Next.js to a newer major version, preserved the critical ROI UI, and kept Mixpanel on those paths through redesigns.
- Developed redesigned onboarding and event pages, and expanded unit and end-to-end tests across Go services and React/Next.js.
- Developed features and tests from specs with Cursor and coding agents, then deployed manually after human review.

Fullstack / CTO · Elitebrains.com 2021–2024

Prague

React, Next.js, TypeScript, Node.js, Express, Symfony, MongoDB, MySQL, GCP, Judge0 (self-hosted on GKE)

- Led engineering for an HR technical-screening and coding-assessment platform.
- Built a React assessment UI and a Node.js path into the existing PHP stack, with AI-generated coding questions evaluated by self-hosted Judge0.
- Deployed Judge0 on GKE with monitoring and autoscaling tuned for bursty assessment load and low idle cost.
- Defined the technical strategy and the delivery process on GCP and on bare metal.

Tech Lead & Web Engineer · PropertyGuru.com.sg 2017–2021

Singapore

React, Redux, TypeScript, Nest.js, Symfony, MongoDB, MySQL, GCP, AWS, Tableau

- Led a 4-person Agile team on listings stats, supply and demand, and user management.
- Built a multi-step AWS image-compliance pipeline with Data Science across on the order of 80M+ user images. The pipeline scored images, routed review, and enforced policy gradually by user role and listing volume, with Redis on the hot path.
- Implemented a multi-country geo schema change for about 20M+ building records with fast SQL, and rolled the change out country by country so downtime stayed minimal.
- Extracted critical paths from a legacy PHP framework into independently deployable Node.js services, with Docker and custom CI/CD, and modernized the frontend with React, Storybook, Material UI, and TypeScript.

Web Engineer · Rabbit Finance, Co. Ltd. 2014–2017

Bangkok

Node.js, TypeScript, PHP, Laravel, MongoDB, PostgreSQL

- Led a small team on a financial-product comparison service (insurance and credit cards) and a Laravel call-center CRM.
- Migrated MongoDB to PostgreSQL overnight for about 500k customers and about 1M products on a high-CPU Google Compute Engine machine. The public comparison engine stayed up with a dual-run fallback until Postgres was the primary database.
- Built the web and CRM products and oversaw mobile work for a Bangkok Skytrain rewards program.

Co-founder & Web Engineer · BeatBeat 2012–2014

Prague

Icecast, Python Tornado, Flask, MySQL

- Built music streaming apps from zero, with Icecast streaming servers, a Python Tornado control API, and a Flask and MySQL web app.
- Represented the company at investor pitches.

Web Engineer · CLEEVIO 2010–2012

Prague

C#, JavaScript, HTML, CSS

- Built cross-browser extensions for Internet Explorer, Chrome, and Firefox in C#, JavaScript, HTML, and CSS, including an ad blocker.

PROJECTS

Ask Tomi · tomibabjak.dev 2026

- Shipped a persona-grounded interview assistant: a Python Cloudflare Worker with follow-up memory and rate limits, and a public React chat.

FlightRadar24 receiver 2023

- Built an ADS-B air-traffic receiver on a Raspberry Pi and a map for the tracks.

EDUCATION

Czech Technical University, Prague 2009–2013

INTERESTS

Plane spotting and flight tracking.
