Tomas Babjak (Tomi)

Senior Backend Engineer · Prague, Czechia

babjatom@gmail.com · +66 82 782 9578 · linkedin.com/in/babyak · github.com/babjatom · tomibabjak.dev

Senior backend engineer with over 10 years building APIs and data systems in Go, Node.js, Python, and PHP. Owned cloud architecture on AWS and GCP, including Lambda, DynamoDB, Postgres, and GKE. Shipped a geo schema change for about 20M+ building records, an overnight MongoDB to PostgreSQL cutover for about 500k customers, and self-hosted Judge0 for a coding-assessment platform.

SKILLS

Backend	Go, Node.js, NestJS, Python, PHP, C/C++
Languages	Go, TypeScript, Python, PHP, JavaScript, C#
Data	PostgreSQL, MySQL, MongoDB, DynamoDB
Cloud	AWS (Lambda, Step Functions, AppSync), message queues, GCP, GKE, Docker, Cloudflare Workers, R2, D1, GitHub Actions, Vercel
Observability	Datadog, Sentry, New Relic, Mixpanel
Frontend	React, Next.js, TypeScript, Redux, Tailwind CSS, Storybook, Material UI
Practices	Testing, domain-driven design, Temporal durable executions
AI tooling	Cursor, Claude Code, GitHub Copilot. Experimenting with local open-source LLMs and inference on a rented GPU on vast.ai.

EXPERIENCE

Fullstack Engineer · Plots Inc 2024–2026

Los Angeles

React, Next.js, TypeScript, Go, AWS, DynamoDB, Lambda, Postgres, GraphQL, AppSync, Tailwind CSS, Mixpanel

- Built analytics services in Go on Postgres, DynamoDB, and Lambda, and the React and Next.js pages those services feed.
- Developed features and tests from specs with Cursor and coding agents, then deployed manually after human review.
- Expanded unit and end-to-end tests across the Go services.
- Migrated Next.js to a newer major version and kept Mixpanel on the ROI UI through redesigns.

Fullstack / CTO · Elitebrains.com 2021–2024

Prague

React, Next.js, TypeScript, Node.js, Express, NestJS, MongoDB, MySQL, GCP, Judge0 (self-hosted on GKE)

- Deployed Judge0 on GKE with monitoring and autoscaling tuned for bursty assessment load and low idle cost.
- Built a Node.js path from the React assessment UI into the existing PHP stack. Self-hosted Judge0 evaluated the AI-generated coding questions.
- Led engineering for the HR technical-screening and coding-assessment platform.
- Set the delivery process on GCP and bare metal, and kept Kubernetes for bursty assessment load instead of always-on capacity.

Tech Lead & Web Engineer · PropertyGuru.com.sg 2017–2021

Singapore

React, Redux, TypeScript, NestJS, MongoDB, MySQL, GCP, AWS, Tableau

- Implemented a multi-country geo schema change for about 20M+ building records with fast SQL, and rolled the change out country by country so downtime stayed minimal.
- Built a multi-step AWS image-compliance pipeline with Data Science across on the order of 80M+ user images. The pipeline scored images, routed review, and enforced policy gradually by user role and listing volume, with Redis on the hot path.
- Extracted critical paths from a legacy PHP framework into independently deployable Node.js services, with Docker and custom CI/CD.
- Led a 4-person Agile team on listings stats, supply and demand, and user management, and modernized the frontend with React, Storybook, Material UI, and TypeScript.

Web Engineer · Rabbit Finance, Co. Ltd. 2014–2017

Bangkok

Node.js, TypeScript, PHP, Laravel, MongoDB, PostgreSQL

- Migrated MongoDB to PostgreSQL overnight for about 500k customers and about 1M products on a high-CPU Google Compute Engine machine. The public comparison engine stayed up with a dual-run fallback until Postgres was the primary database.
- Led a small team on a financial-product comparison service (insurance and credit cards) and a Laravel call-center CRM.
- Built the web and CRM products and oversaw mobile work for a Bangkok Skytrain rewards program.

Co-founder & Web Engineer · BeatBeat 2012–2014

Prague

Icecast, Python, MySQL

- Built music streaming apps from zero, with Icecast streaming servers, a Python control API, and a MySQL web app, and represented the company at investor pitches.

Web Engineer · CLEEVIO 2010–2012

Prague

C#, JavaScript, HTML, CSS

- Built cross-browser extensions for Internet Explorer, Chrome, and Firefox in C#, JavaScript, HTML, and CSS, including an ad blocker.

PROJECTS

Ask Tomi · tomibabjak.dev 2026

- Built a persona-grounded interview API as a Python Cloudflare Worker, with follow-up memory and rate limits, and a public React chat.

Flood monitor · flood.tomibabjak.dev 2026

- Built live flood monitoring for Thailand, with Cloudflare R2 storage and Cloudflare Workers.

FlightRadar24 receiver 2023

- Built an ADS-B air-traffic receiver on a Raspberry Pi and a map for the tracks.

EDUCATION

Czech Technical University, Prague 2009–2013

INTERESTS

Plane spotting and flight tracking.
